PROFESSIONAL SUMMARY

Software engineer (B.Tech CSE – AI & ML, 2026) with object-oriented experience in Kotlin, Java and Python, focused on automation that fails safely. Built StudentConnect, a Python system that ingests jobs from 35 company career systems, validates LLM-scored matches and runs scheduled jobs without duplicate sends, backed by 229 tests. At OneBanc, blocked 50+ bugs from reaching production in a fintech Android app and turned raw ML output into structured data across 5+ edge cases. Applied NLP and ML (HuggingFace, PyTorch, spaCy) in a React/FastAPI app that lifted engagement 30%.

EXPERIENCE

OneBanc Technologies | Gurugram, India **Dec 2025 – Oct 2026**

Android Developer

- Improved ML Kit OCR text-recognition accuracy by up to 85% over the baseline across varied real-world inputs by engineering advanced image-preprocessing pipelines, eliminating manual correction for 3 document types.
- Reduced pre-production defect leakage by catching 50+ functional and UI bugs before release through systematic edge-case testing of full user flows and failure scenarios.
- Architected multi-stage data pipelines using Kotlin Coroutines and Flow/StateFlow to convert raw ML outputs into structured data for core transaction workflows, ensuring reliability across 5+ edge-case scenarios.
- Worked with partner SDKs and shared libraries across the fintech app, and used CI/CD pipelines for automated builds, testing and release verification.

Infosys Springboard | Remote, India **Sept 2025 – Oct 2025**

Cloud AI Intern

- Achieved 96% word accuracy on a pilot audio corpus by building an Azure Speech-to-Text prototype with the Cognitive Services SDK, demonstrating production-grade NLP pipeline design.
- Contributed to a team STT evaluation framework, benchmarking Azure Cognitive Services across 3 audio-quality tiers to guide model selection.

PROJECTS

StudentConnect — Python · Flask · SQLite · Groq / Gemini APIs · GitHub Actions

- Kept job data accurate across a 35-company catalog (Greenhouse, Lever, Ashby, Workday, Oracle, custom sites) by separating complete snapshots from partial feeds, so a failed fetch never closes live jobs.
- Rejected invalid LLM output before it reached users by validating every fit score’s total, category and evidence reference against numbered source lines on a 100-point rubric.
- Sustained matching through Groq rate limits at no paid-tier cost by falling back to Gemini on HTTP 429, with identical validation on both providers.
- Prevented lost or stale matches across restarts and profile edits by adding durable matching tasks, stale-score marking and process locks.
- Delivered scheduled fetch, scoring and email digests to 5 invited users via GitHub Actions and an authenticated worker API, with no duplicate mail by never auto-retrying uncertain SMTP sends; verified by 229 offline tests.

Emotion-Aware Journal App — Python · FastAPI · HuggingFace Transformers · PyTorch · React.js · Firebase

- Increased average session engagement by 30% by building a full-stack AI journaling app with a fine-tuned HuggingFace Transformer emotion classifier and spaCy keyword extraction.
- Reduced backend response latency by serving NLP models through async FastAPI endpoints, with real-time Firebase sync for 100+ concurrent journal entries.

TECHNICAL SKILLS

Languages: Kotlin, Java, Python, JavaScript, C
Android: Jetpack Compose, MVVM, Hilt, Room, Navigation, Retrofit, Kotlin Coroutines, Flow/StateFlow, ML Kit, REST APIs, Gradle, Google Play Store
Testing: Unit and instrumentation testing
GenAI / LLM: LLMs, GenAI, Prompt Engineering, RAG, Embeddings, Vector Databases, LangChain, Google Gemini API
AI / ML: PyTorch, TensorFlow, Scikit-learn, HuggingFace Transformers, spaCy, OpenCV, NumPy, Pandas, MLOps
Cloud & DevOps: Azure Cognitive Services, Firebase, CI/CD, Git, Docker (fundamentals)
Databases: PostgreSQL, MongoDB, SQL

EDUCATION

UPES, Dehradun **Aug 2022 – May 2026**

B.Tech, Computer Science Engineering (AI & ML) | CGPA: 8.0

ACHIEVEMENTS & CERTIFICATIONS

- 2nd Place, IBM Ice Day Innovation Event — competed against 30+ teams in a product innovation challenge.
- Authored research paper: "AI & ML Techniques in Sustainable Healthcare Systems" — peer-reviewed journal, 2026.
- Completed 40-hour DevOps Bootcamp: CI/CD pipelines, Git workflows, containerization and deployment fundamentals.
